### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art does not suggest a water swelling composition comprising 10-90% by weight of a layered material, 1-20% by weight of an elastomer, 8-65% by weight of polypropene and/or polybutene, and 0.1 to 20% by weight of an onium ion - liberating compound and/or reactive coupling agent. Applicant's data in the specification at pages 17-21 indicates that the layered material treated with an onium ion-liberating compound or a coupling agent results in increased d-spacing between the platelets wherein polypropene or polybutene are intercalated, and allows for increased water absorption of the water swelling composition.

There are fundamental differences between the peptizing process disclosed in the Harriet patent and the mechanism which results from the use of the coupling agent in the present US application. The peptizing process does not affect the D-spacing. A peptizing agent is an agent used to disperse a substance into a colloidal form such as to disperse clay in water to form a suspension,

A coupling agent is an agent that is used to provide a bond between two incompatible substances.

It is not necessary that applicant submit a response as indicated in the interview summary dated 1/31/2006.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
